Features and Capabilities of MyHealthAngels

The major features and capabilities that you (the Physician) get from using MyHealthAngels are the following:

- **Clinical Health Record (CHR)** for the proper organization of your clinic or multi-clinic. Complete and easy to use, quick and effective for extracting clinical conclusions about the past, the present and the future of your patients!

  o Provides management services for diagnoses, patient visits, medical notes, measurements, medical history, appointments, medications, referrals, procedures, etc.

  o Quick and secure storage and recall of medical information, thus gaining time from searching.

  o Ability to use existing data by transferring them into MyHealthAngels, thereby no time is going to be spent during operation.

- **Personal Health Record** (PHR) to your patients, that provides management of their personal medical data. A great new Service for your patients!

- A unique approach in the exchange of medical data between you and your patients, thus creating and improving the physician - patient relationship.

- A **Diagnoses** module for documentation, using ICD10 based diagnoses.

- **Connection to the e-prescription system of IDIKA (in Greece).** You (the physician) can prescribe drugs through MyHealthAngels platform, without the need of a secondary prescription System!

- An effective way to manage your **Appointments, with panoramic view of all your appointments.**

- An effective way to manage your Patient **Encounters** (Patient Office Visits).

- A flexible **Physician Notes** module with **printing** capabilities.

- An exceptional **Patient History** management system.

- A useful **Allergies** module with **auto-alert** functionality.

- Automatic notification to you (the physician), regarding the laboratory results of your patients, with e-notification.

- **E-Notification feature:** Automatic notification to you (the physician), regarding the examination results of your patients!

- A Medical **Procedures** module, supporting all the available procedures.

- A **Lab Results** module for documenting your patient's laboratory results, with automatic transfer to you and your patient's Personal Health Record.

- An **Observations** module with standard observations already included, like blood pressure, weight, pulse, height etc.

- A **Medications (drugs)** module for managing patient's medications list.

- **Referral Management** module, that supports To and From referrals, for laboratory exams, with full printing capabilities.

- A flexible **Medical Documents** Module for managing **Attachments.**

- **Secured Medical Data,** during transportation and storage, by using powerful & complex encryption algorithms! Furthermore each account and each transaction is completed and stored separately, for maximizing the level of security. The platform is provided as Software as a Service model (SaaS), over the Internet, without the need of any Software installation. You can use it with any device through a web Browser like Firefox and Chrome!

- Continuous and automatic system updates that are readily available to You (4 times per year).

- MyHealthAngels is based and includes all major international standards of medical information systems (such as HL7) and dictionaries (such as ICD-10, ICPC: International Classification of Primary Care).
